

## *Join us again for...* Hearing Loss Jeopardy

In this QUIZ you have to respond with the **questions** to the given answers. Your response will always begin with “*What... or Who...*” **Have fun – and no cheating!!** 😊

(Special thanks to Judy Vinegar for this month’s quiz!)

1. **A:** A simple, personal amplifier that consists of a microphone, an amplifier (about the size of a pack of cigarettes), and an appropriate listening option (such as ear buds or headphones, or neckloop)
2. **A:** The instant translation of the spoken word into text using a stenotype machine, notebook computer and real-time software.
3. **A:** A type of ALS/ALDs (Assistive Listening System/Assistive Listening Device) that uses radio frequencies to transmit sound. It consists of a transmitter equipped with a microphone used by a speaker and a receiver equipped with an appropriate listening option worn by the listener.
4. **A:** A telephone that allows a person with hearing loss to read and listen to the caller almost simultaneously.
5. **A:** An alarm clock that vibrates instead of rings.
6. **A:** A small coiled wire placed within the hearing aid which allows the hearing aid to bypass the hearing aid microphone to obtain a sound signal. This small coiled wire is popularly used to prevent feedback when using the telephone.
7. **A:** A device that fits in between the handset and base of a phone and can offer 20-40 dB volume gain to better hear callers.
8. **A:** Communication tips which help people with hearing loss to manage themselves and manage situations by preventing and reducing communication problems related to hearing loss.
9. **A:** To increase the volume of the desired sound without increasing the level of noise.

Scroll to page 3 to see how many you got correct ...

1. A: A simple, personal amplifier that consists of a microphone, an amplifier, and an appropriate listening option (such as ear buds or headphones)

Q: What is a Pocket Talker (or a hardwired Assistive Listening Device?)

2. A: The instant translation of the spoken word into text using a stenotype machine, notebook computer and real-time software.

Q: What is CART (Communication Access Real-Time Translation)?

3. A: A type of ALS (Assistive Listening System) that uses radio frequencies to transmit sound. It consists of a transmitter equipped with a microphone used by a speaker and a receiver equipped with an appropriate listening option worn by the listener.

Q: What is an FM System?

4. A: A telephone that allows a person with hearing loss to read and listen to the caller.

Q: What is a Captioned phone?

5. A: An alarm clock that vibrates instead of rings.

Q: What is a vibrating alarm clock?

6. A: A small coiled wire placed within the hearing aid which allows the hearing aid to bypass the hearing aid microphone to obtain a sound signal. This small coiled wire is popularly used to prevent feedback when using the telephone.

Q: What is a tele-coil, T'coil or Telephone switch?

7. A: A device that fits in between the handset and base of a phone and can offer 20-40 dB volume gain to better hear callers.

Q: What is an inline amplifier?

8. A: Communication tips which help people with hearing loss to manage themselves and manage situations by preventing and reducing communication problems related to hearing loss.

Q: What are communication strategies?

9. A: To increase the volume of the desired sound without increasing the level of noise.

Q: What is meant by increasing the signal-to-noise ratio?
